

# Body Systems Project

## RESEARCH TASK

Groups will be assigned a specific body system to research, including the following information but not limited to:

- How do the systems work together?
- What does the system do?
- What are the parts of your system? What does each part do?
- What are some diseases or malfunctions that can happen to your system?

### For the hormonal system:

- What is each gland's function?
- Where is it located?
- What would happen without the gland?
- What other systems would be affected without the gland?

---

## REQUIREMENTS

- A. You **must** use only the authoritative sources provided by the library pathfinder – books, databases, or recommended web sites. **You may not use free web sources** provided by Google or other search engines.
- B. You must prepare a Works cited page giving credit to the sources you use. You may copy/paste citations from databases or create your own citations using instructions provided by the Media Center. Your Works Cited page must be in **alphabetical order**.
- C. The groups must make a PowerPoint presentation. In this presentation you **must** have a diagram of your system and be able to explain it. Be creative!
- D. You must make a 10 question quiz that will be given to me before your presentation. Do not worry about making copies for the class. I will pick the questions from everyone's quiz and make 1 open-notebook test. **You must have a variety of questions on your quiz and have an answer key made up.**
- E. We will be in the library for 4 days. Do not waste your library time or you will lose it.
- F. All members of the group **must** work together. Each member will be assigned the **same grade**.
