Graphing Sine and Cosine Functions:

To graph the sine and cosine functions, you need five key points which include the x-intercepts and the maximum and minimum points. Take the following steps when graphing the sine and cosine functions.

Step 1: Find the amplitude and period of the function.

Step 2: Divide the section of the graph into four equal parts.

Step 3: Find the intercept points.

Step 4: Find the max and min points.

Step 5: Graph the five points and draw a smooth curve through them.
