Environmental Club's focus is improving the environment and resource use at Voorhees High School. This student-run, student-driven organization has implemented a full school recycling program where club members collect the recycling every Wednesday and Friday morning throughout the whole school. Meetings are generally held Monday after school in the New Café.

Other projects have been water bottle sales and a large display in the Hunterdon County Library. The club has also traveled to Camden to help construct raised garden beds. Future goals include putting in more water bottle fountains, refurbishing the greenhouse, composting and community outreach.
