

Class Expectations

1. Do your best

“Do your best” has many nuances. It means to be on time to class. It means to be prepared for class with your notebook, writing instruments, and scientific calculator. Complete assignments on time. Get the help you need. Do your own work. Give credit to your sources. You will find that if you do your best you will find the rewards of success and a sense of accomplishment.

2. Treat others in the manner you wish to be treated

Or, don't treat someone in a manner you yourself would not like to be treated. Respect the rights of your classmates to learn. Don't be disruptive during class. Observe the school dress code. Play nicely with others. (This is the Golden Rule. It really works.)

3. Safety in the laboratory and the classroom

The most common cause of accidents in the lab and the classroom is horseplay. The lab is a fun place to be, but it is not a playroom. Please be mindful of what you and your neighbors are doing when working in the lab.

Wear the protective equipment prescribed for the lab. This may include safety glasses or goggles, lab coats, gloves.

Know what to do in case of emergency. Know how to evacuate from the classroom quietly and quickly. Understand what to do in the event of a medical or other emergency in the classroom.

There is no eating or drinking in the science rooms in this building.

Consequences

Consequences for rules violations include: reprimand, detention, notification of parents, visits with Guidance and the Vice Principal.
