

## Lab – Free Fall

---

Which falls faster, heavy or light objects?

In today's exercise we will devise experiments to answer this question.

### Procedure

With a partner, design and execute three experiments which will answer the research question. Record your procedure and observations in an I did/I saw chart.

I did	I saw

Name	Date	Mods
------	------	------

Physics – Song

## **[25] Report – Free Fall**

---

**[1] Write a neat, legible report on a separate piece of paper**

**[1] Give your report an appropriate title**

**[1] Restate the research questions**

**[12] Procedure and observations:**

Include this sheet, your partners' names, and your original observations

**[10] Results and Conclusion**

Answer the research question using a “good paragraph.” Support your answer with your observations.

A good paragraph has a topic sentence, three or more supporting sentences, and a clincher – a compound, complex sentence that elegantly restates the topic and supporting sentences.
