

North Hunterdon-Voorhees Regional High School District

"Providing Success For All Students"

1445 State Route 31, Annandale, NJ 08801 Tel: 908-735-2846 FAX: 908-735-6914 JEFFREY BENDER
Superintendent of Schools

RICHARD A. BERGACS, Ed.D. Assistant Superintendent of Schools

KATHRYN BLEW, CPA
Acting School Business Administrator/
Secretary, Board of Education

April 17, 2020

To Whom It May Concern:

Under the Energy Savings Improvement Program ("ESIP"), the District issued an RFP (Request for Proposals) to solicit qualified companies to compete for a Solar Energy Power Purchase Agreement (RFP Number 2020-01) to generate solar electricity from solar energy systems to be located at the North Hunterdon and Voorhees High School locations.

An Evaluation Committee ("the Committee") is comprised of the School Business Administrator and the Assistant Superintendent. The Committee's role was to fairly evaluate the proposals and to ensure that each proposal met the goals of the District's plan. The Committee also utilized an evaluation report prepared by the District's ESIP partner, Honeywell Building Solutions ("Honeywell") to determine which proposal best fulfilled the RFP objectives. Honeywell's report is attached.

The RFP contained three (3) bidding options: Roofs and Canopies, Roof Only, or Canopy Only. The Committee came to a consensus to decide on the Roof Only option. The Roof Only option was chosen due to the highest savings and lowest cost, with the least disruption to the school facility site.

Seven companies responded with proposals that were received and opened on Wednesday, February 26, 2020. Proposals were received from the following companies: Advance Solar Products (ASP), BrightCore, Constellation NewEnergy, Inc., Ferreira, HESP Solar, Marina and Solar Landscape. Marina's proposal was determined to be flawed and/or deficient, which removed this company from advancing in the evaluation process.

The Committee requested that the proposers extend their proposed pricing longer than the typical 60 days in order to allow the Committee additional time to review their proposals, and to review the findings prior to award. Ferreira, Marina and Solar Landscape did not extend the pricing past the 60 days, while the remaining four companies consented to the extension.

The Committee scored proposals on a pre-established set of criteria. Based on the excellent savings and pricing offered by ASP, and the highly evaluated technical proposal, proposed equipment and their superior experience in delivering Solar PPA services, the Evaluation Committee held an interview with the team from ASP via teleconference. The Committee posed questions and sought clarification concerning various aspects of the proposal. The interview provided confirmation to the Committee in its assessment of the proposals and their recommendation of ASP as the awardee.

Based on the criteria for selection as established in the issued RFP document, the Committee determined that Advanced Solar Products (ASP) will best meet the RFP requirements. Therefore, the Committee recommends that the Board approve awarding the contract for the Solar Energy Power Purchase Agreement to ASP and for Board staff and ESIP consultants proceed with the implementation of the contract.

Enclosed: Bid Evaluation Analysis

REQUEST FOR PROPOSAL FOR A SOLAR ENERGY POWER PURCHASE AGREEMENT TO PROVIDE SOLAR GENERATED ELECTRICITY FOR NHVRHSD

BID EVALUATION ANALYSIS Confidential

April 7, 2020

Prepared by:

Honeywell Building Solutions Energy Services Group

Summary of Proposals

In accordance with The BOE approval; a request for proposals (RFP) was issued by The BOE seeking bids from qualified energy services firms to provide a power purchase agreement service to generate solar electricity for the entire site including roof and ground mounted options. The base bid includes the roof and 3 arrays on the ground and the add/Alternate is ground mounted array 4 as an addition to the project.

There were 7 bids (proposals) submitted prior to the due date and time:

Solar Capacity Comparison by Proposer and Design Options

	BASE BID	OPTION 1	OPTION 2
	Roofs &		
	Canopy KW	Canopy ONLY	Roof ONLY
Proposers	dc	KW dc	KW dc
ASP			
	3,138.08	2,055.48	1,834.66
BRIGHTCORE			
	3,146.57	1,734.84	1,411.73
CONSTELLATION			
	2,732.80	1,550.40	1,182.40
FERREIRA			
	3,150.40	1,749.60	1,400.80
HESP			
	3,048.82	N/A	1,796.80
MARINA	N/A	N/A	N/A
SOLAR			
LANDSCAPE	1,130.00	N/A	1,766.00

In evaluating the bids, the goals and objectives of the BOE were carefully considered. The criteria established in the RFP are:

- Price per solar kWh, as well as total long-term savings (35%);
- Quality of the proposed equipment and the technical design (40%);
- Qualifications and experience of the vendor (vendor teams) (25%).

Each of these bidders had a good pricing structure, good proposed design and good projected 15-year savings. Also, their experience with solar construction is acceptable; and they have good experience in providing solar energy systems; including New Jersey public works projects specifically.

However, due to the number of bidders and the resulting evaluation of the proposals, Marina is not competitive with their pricing and also did not provide a notarized bid bond with their proposal as required. Constellation included a list of assumptions and terms that exclude compliance with both equipment minimum requirements, construction requirements and obligation to assume a base cost for interconnection costs in such a way that their proposal becomes deficient as compared to the minimum requirements of the RFP (see page 27 of their proposal). In addition, Brightcore has inserted their form of PPA agreement into the proposal. Due to the competitive nature of their pricing and savings they have been summarized in this report, however. It must be made clear that the form of PPA contract that they included in their bid cannot be used; and the form of PPA contract included in the RFP shall be the contractual agreement for the awarded bidder.

Solar kWh Pricing and Total Saving Comparison

The Price/Savings is 35% of the evaluation criteria; as such, 35 points out of 100 are assigned to the evaluation of this aspect of the recommended proposals. (17.5 for \$/KWh and 17.5 for highest 15-year savings.)

Point comparison based on the proportional differential percentage in comparison to highest ranking bidder.							
15 Year Savings Comparison

Comparison of Pricing based on the KWh price for the Option 1 Canopy ONLY. Due to the much better pricing and savings for the Base bid and Option 2, it is not recommended that the canopy only alternate be selected unless the district does not want to use the roofs for the solar installation.

Comparison of Pricing based on the KWh price for Option 2 – Roofs ONLY. While the savings are the highest for the base bid design proposals; the price per KWh for the roof only option is very low and the savings are almost as much from certain proposers. The Evaluation Committee should consider carefully between the Base bid best which has the highest overall savings and the Option 2 which has the best pricing and very high savings in comparison to the Base Bid.

Conclusions and Recommendations

Each of these bids would provide viable solutions and substantial savings to the BOE. However, based on all of the evaluation criteria the bids submitted by ASP and Brightcore score highest in both savings/price, as well as have excellent equipment and design as well as good experience.

In the next section, there are more detailed summaries of the 5 bidders' proposals that detail the price, saving, technical design, proposed equipment and provided documentation of the bidder's qualifications and experience in delivering PPA services. Honeywell does not recommend that the evaluation committee consider either Marina or Constellation proposals for award due to the aforementioned issues with their submissions.

The Evaluation Committee should make a decision based on the proposals; whether or not to award the Base Bid or Option 2 Roofs-ONLY in determining the best option for the district.

NOTES: This team has the most experience especially with New Jersey School District solar energy projects. The design includes high efficiency equipment that complies or exceeds the specifications in the RFP. Their proposal is the best price in savings if option 2 is selected and the highest savings and 2nd best price on the base bid.

NOTES: This team has included a PPA contract agreement into their bid. It must be made clear to them that the Exhibit C PPA agreement approved by the Districts attorney is the contract and no substantial changes can be made in accordance with Public Bid Law in New Jersey. Brightcore did not submit the required forms such as Business Registration etc. for their company. They did provide these documents for subcontractors, however they as the lead should provide the valid required forms as is required by the RFP and bid law.
