**Instructions for Drinking Water Lead and Copper Testing**

Dear Water Customer:

Thank you for contacting us regarding Lead and/or Copper testing for your water. In order to sample your system for lead and/or copper contamination, we need to have you collect water samples drawn first thing in the morning, before any general water use in the water system. We appreciate your cooperation in this. A pickup date for the sample along with the bottom of this sheet should be arranged at the time of instruction and bottle drop off.

With this sheet, bottles were dropped off for sampling use. Please read the following instructions carefully. A sample is to be collected after an extended period of time (6-12 hours) with no water use during this time period within the interior piping.

The following is the proper sampling protocol:

1. Wait a minimum of eight (8) hours, but not more than eighteen (18) hours with no water being used during this time. (Example: Go to bed at 11 p.m., wake up at 7 a.m. and collect before any water usage).
2. You have been provided a one (1) liter bottle specially prepared for this analysis by PACE, use this bottle only for this purpose. **DO NOT RINSE BOTTLE!**
3. A kitchen or bathroom COLD water faucet is to be used for sampling. Place the bottle under the tap and slowly fill the bottle to the shoulder and turn water off.
4. Tightly cap the bottle and fill out the label to the best of your ability. In addition, please fill out the information provided below.
5. Leave the bottle outside on the arranged date for pick up to be brought back to the Laboratory for analysis.
6. Mark each bottle with the sample location, date and time of sampling.

THANK YOU FOR YOUR COOPERATION!

Water was last used      Time: 9:00 PM      Date: 11-21-25

I have read the above directions and have taken a sample in accordance with this sample protocol:
